

The loss of information and data contained in your computer system is potentially more harmful than the loss of computer equipment itself

Modern businesses have become increasingly reliant on computer systems and the information contained within them.

By carrying out a detailed information and computer security survey, Alliance 7Safe can make practical recommendations that will help prevent loss of future productivity, damage to reputation and loss of business.

Key benefits of the Risk Reduction Action Plan

We work with your chosen recovery team in planning and producing documentation which:

- > Aids business continuity and reduces the threat of serious interruption to your business
- > Avoids potential business losses following computer or information theft
- > Protects supplier relationships
- > Protects customer relationships
- > Creates opportunities to reduce insurance premium spend
- > Minimises risk to your computer equipment
- > Gives peace of mind knowing that threats to your information systems have been minimised.

Support
